***Allowable Subject Matter***

1. Claims 1-83 are allowed.
2. The following is an examiner's statement of reasons for allowance:

This application is allowed because the prior art fails to disclose a system for supporting performer interactions with a self-organizing chemical reaction, wherein the system comprises a chemical reaction vessel containing a self-organizing chemical reaction, wherein the self-organizing chemical reaction initially comprising at least two constituent chemical reactants. The present system further comprises a monitor element for monitoring said self-organizing chemical reaction, thereby producing observation signals associated with said self-organizing chemical reaction, and further including at least one controller element for controlling chemical reactions of said self-organizing chemical reaction, wherein said at least one controller element is responsive to a reaction control signal. The present system also comprises a processing element for converting at least one incoming performance signal into said reaction control signal using one of a selectable plurality of control-conversion algorithms, wherein said at least one incoming performance signal responsively controls chemical variations of said self-organizing chemical reaction. The prior art fails to teach these elements and therefore the application is allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
